Get assured relief from

GERD, Chronic Gastritis & Dyspepsia

Tablet in
Capsule Technology

RABTHETA™ DSR

**Rabeprazole Sodium 20mg (EC) +
Domperidone 10mg (IR) + Domperidone 20mg (SR) Capsules**

Rabeprazole Sodium 20mg (EC)

- EC Stands for enteric coating, meaning the medication is designed to dissolve in the small intestine rather than the stomach.
- It is used to treat conditions like GERD, peptic ulcers (gastric and duodenal) and erosive esophagitis caused by acid reflux.

Domperidone 10mg (IR)

- IR Stands for immediate release, meaning the medication is released quickly into the body.
- It helps to relieve nausea and vomiting by improving the movement of the stomach and intestines.

Domperidone 20mg (SR)

- SR Stands for sustained release, meaning the medication is released slowly over time.
- This extended release can provide longer-lasting relief from nausea and vomiting.

The combination is prescribed for more effective management of GERD and other conditions where acid reflux, nausea and vomiting are significant symptoms.

INDICATIONS

GERD | Acid Reflux | Peptic Ulcers | Dyspepsia

Nausea & Vomiting | Zollinger-Ellison Syndrome
